

SANTHI PRIYA MEDAGAM

Senior Software Engineer – Backend Java | Cloud | Microservices | 5+ Years

9553222470 | santhimedagam@equifax.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 5+ years of experience designing and delivering scalable, cloud-native backend solutions using Java (Spring Boot) and .NET (C#) on GCP and AWS. Deep expertise in distributed systems design and microservices architecture, including high-throughput real-time data pipelines (Apache Beam/Dataflow), event-driven systems (Pub/Sub), and system design across multi-tenant cloud environments. Hands-on experience with CI/CD automation, SDD-driven development using Kiro, building custom AI agents with Google ADK, and AI-assisted engineering via GitHub Copilot and Gemini Code Assist. Adept at leading cross-functional collaboration to deliver enterprise-grade I-9 compliance platforms on Kubernetes (GKE) serving large-scale business clients.

TECHNICAL SKILLS

Languages: Java (Spring Boot), C#, SQL, Python, JavaScript, HTML, CSS

Frameworks: Spring Boot, ASP.NET, Apache Beam/Dataflow

Cloud & DevOps: Google Cloud Platform (GCP), AWS S3, Kubernetes (GKE), Docker

Databases: BigQuery, Firestore, Spanner, MSSQL, Elasticsearch

CI/CD & Pipelines: Jenkins (pipeline development), GitLab CI, Composer DAGs (Python), Git

AI / Dev Tools: GitHub Copilot, Gemini Code Assist, Agent Development Kit (ADK), Kiro (SDD), Postman, Bruno

Monitoring: Datadog, Looker Studio, JIRA, Confluence

Architecture: Microservices, Distributed Systems, System Design, Event-driven (Pub/Sub), REST APIs, Agile/Scrum

CERTIFICATIONS

- Google Cloud Certified – Associate Cloud Engineer
- Google Cloud Certified – Professional Cloud Architect
- Google Cloud Certified – Generative AI Leader

WORK EXPERIENCE

Sails Software Solutions Pvt Ltd — Vizag

May 2021 – Present

Project 1: I-9 HQ – Migration Tooling Team (GCP)

Client: Equifax | Role: Backend Engineer – Data Pipeline & Migration | Stack: Java · Spring Boot · Apache Beam/Dataflow · BigQuery · Firestore · Spanner · Pub/Sub · GCS · Jenkins · Cloud Composer

Built and owned the standalone migration tooling service — separate from the core product team — responsible for ingesting and transforming I-9 records from legacy systems into Equifax I-9 HQ end-to-end.

- Architected a two-iteration migration microservice (Tooling 1.0 / 2.0), integrating Apache Dataflow (Beam) in v2.0 to replace direct API calls — boosting throughput by 3x and cutting manual migration effort by ~60%.
- Designed GCP Pub/Sub event-driven ingestion to receive legacy file receipts and stage raw data in BigQuery, enabling zero-data-loss downstream transformation to Firestore and Spanner.
- Built Jenkins CI/CD pipelines and Cloud Composer DAGs (Python) to automate Dataflow job scheduling and deployment, significantly reducing manual release overhead.
- Leveraged GitHub Copilot, Gemini Code Assist, and a custom-built Google ADK agent to accelerate ETL development and streamline repetitive workflow tasks.

Project 2: I-9 HQ – Core Product Team (Microservices Backend)

Client: Equifax | Role: Backend Engineer – API & Platform Development | Stack: Java · Spring Boot · Kubernetes/GKE · Firestore · Spanner · Datadog · Looker Studio · JUnit/Mockito

Core product team owning feature delivery, API development, and production stability of the I-9 HQ platform — distinct from the migration tooling team.

- Designed and delivered 10+ production Spring Boot microservice APIs for I-9 compliance features, applying SDD methodology via Kiro to define contracts and data models upfront — reducing rework and aligning teams.
- Maintained 90%+ unit test coverage using JUnit and Mockito, enforcing CI/CD quality gates and preventing production regressions across multi-tenant workloads on Kubernetes (GKE).
- Monitored platform health via Datadog and Looker Studio, diagnosing 5xx/4xx error spikes and reducing mean incident resolution time by ~40%.
- Authored production scripts and CURL tooling for rapid live-data diagnosis and hotfix execution, minimising customer-impacting downtime without full redeployments.

Project 3: Simplifi-9 – HIREtech Migration Team (AWS)

Client: HIREtech → Equifax | Role: Backend Engineer – Migration Service Development | Stack: C# · ASP.NET Framework · AWS S3 · Elasticsearch · MSSQL

Cross-vendor migration team on a .NET/AWS stack, transferring HIREtech employee I-9 portal data into the Equifax I-9 HQ platform — independent of the GCP teams.

- Built an ASP.NET/C# Windows Service to orchestrate end-to-end migration of HIREtech I-9 records — form data, documents, and audit trails — into the Equifax I-9 HQ platform.
- Designed a staging and state-tracking layer using AWS S3 and MSSQL, enabling reliable batch retry/resume and ensuring 100% field-level schema compliance with Equifax APIs.
- Conducted rigorous data validation across multiple client datasets prior to cutover, resolving all anomalies to achieve zero critical issues at go-live.

EDUCATION

Bachelor of Technology, Computer Science

Rajiv Gandhi University of Knowledge and Technologies (IIIT Nuzvid) | 2021
